Brainstorming & Idea Prioritization

Wandr AI – AI Travel Itinerary Planner

1. Problem Space Overview

Millions of travellers spend hours assembling itineraries from scattered sources. There is no tool that combines personalised AI generation, budget tracking, and live day-regeneration in one seamless product. Wandr AI solves this by letting users describe a trip and receive a complete, editable, AI-generated day-by-day plan in seconds.

2. Brainstorming Sessions – Ideas Generated

Idea	Category	Feasibility	Impact
AI-generated day-by-day itinerary	Core Feature	High	Very High
Groq LLM for fast generation (<10 s)	AI/ML	High	Very High
Per-day regeneration without losing the rest	Core Feature	High	High
Budget breakdown with chart visualisation	UX	High	High
Email-based auth via Supabase	Security	High	High
Row-Level Security so users see only their trips	Security	High	High
Multiple travel styles (Budget/Luxury/Adventure…)	Personalisation	High	High
Accessibility & dietary preference fields	Inclusivity	Medium	Medium
Offline caching of itinerary	Performance	Low	Medium
Multi-language output	Internationalisation	Low	High

3. Idea Prioritization Matrix (MoSCoW)

Priority	Feature	Rationale
Must Have	AI itinerary generation (Groq)	Core value proposition
Must Have	User authentication (Supabase Auth)	Data security requirement

Must Have	CRUD for trips (create, view, edit, delete)	Basic functionality
Must Have	Budget tracking per day & total	Key user need
Should Have	Day regeneration	Differentiator
Should Have	Travel style & pace preferences	Personalisation
Should Have	Recharts budget visualisation	UX enhancement
Could Have	Dietary and accessibility fields	Inclusivity
Won't Have (v1)	Multi-language output	Out of scope for MVP
Won't Have (v1)	Offline caching	Complexity vs. benefit

4. Selected Concept

The team selected the **AI-Powered Travel Itinerary Planner** concept because it directly addresses a high-pain, high-frequency problem, is achievable with the available Groq AI API and Supabase backend within the project timeline, and has clear monetisation potential.
