Problem-Solution Fit

Wandr AI – AI Travel Itinerary Planner

1. Problem-Solution Matrix

User Problem	Wandr AI Solution	Fit Confidence
Planning a multi-day trip takes hours	AI generates complete itinerary in <30 s	High
Generic recommendations ignore travel style	Travel style, pace, interests, and dietary fields personalise output	High
Budget surprises during the trip	Budget breakdown tab shows per-day and total estimated cost upfront	High
Changing one day invalidates the whole plan	Day regeneration replaces only the selected day	High
Users can't trust AI-generated URLs / bookings	booking_url always null; only descriptions and suggestions are AI-generated	High
Data privacy – my trips are personal	Supabase RLS + JWT ensures strict user_id isolation	High

2. Value Proposition Canvas

Customer Jobs:

- Plan a complete multi-day trip itinerary (functional job)
- Feel in control and not overwhelmed (emotional job)
- Share a polished plan with travel companions (social job)

Pains:

- Hours of manual research across multiple sites
- Budget uncertainty
- Rigid plans that can't be easily adjusted

Gains:

- Complete, personalised itinerary in seconds
- Upfront budget estimate with breakdown
- Ability to regenerate any single day

3. Differentiation from Alternatives

Alternative	Limitation	Wandr AI Advantage

Google Maps / TripAdvisor	No integrated day-by-day planning	Complete AI-generated structure
ChatGPT (direct)	No persistence, no budget tracking	Saved trips, editable, budget tab
Travel agencies	Expensive, slow, not personalised	Instant, free, fully personalised
Spreadsheet planning	Time-consuming, no AI	AI does the heavy lifting
