Demonstration of Proposed Features

Wandr AI – AI Travel Itinerary Planner

Live Demo URL

Frontend	https://ai-travel-itinerary-planner-frontend-i97y5pqrz.vercel.app
Backend API	https://ai-travel-itinerary-planner-q6j8.onrender.com/docs
Health Check	https://ai-travel-itinerary-planner-q6j8.onrender.com/api/health

Feature Demonstration Walkthrough

Step	Feature Demonstrated	How to Verify
1	Landing page and value proposition	Visit the frontend URL — landing page describes the product
2	User signup	Click 'Get Started Free' → fill email + password → submit → check email for confirmation (or disable in Supabase)
3	User login	Use registered credentials on /login → redirected to /dashboard
4	New trip form	Click 'New Trip' → fill destination (e.g. Kyoto, Japan), 5 days, ■80,000, Cultural style, Moderate pace
5	AI itinerary generation	Click 'Generate Itinerary' → loading state appears → complete day-by-day itinerary displayed in 8–20 s
6	Trip detail view	Expand any day card to see activity cards with times, costs, locations, and tips
7	Budget breakdown	Click 'Budget' tab → Recharts chart shows per-day cost vs. total budget
8	Day regeneration	Click 'Regenerate' on Day 2 → AI generates a fresh Day 2 without affecting other days

9	Trip editing	Navigate to Edit → change title or additional instructions → save
10	Trips list	Navigate to /trips → paginated list of all your saved trips

All 20 Functional Features – Demonstration Status

All 20 functional features listed in the Development Phase document are demonstrable in the live deployment. No features are stubbed or mocked. The AI generation uses the actual Groq API with model openai/gpt-oss-120b. Authentication uses the actual Supabase project. Data is persisted in the actual Supabase PostgreSQL database.
