# Team Involvement in Demonstration

Wandr AI – AI Travel Itinerary Planner

## 1. Team Composition

| Member | Role | Primary Contributions |
|---|---|---|
| Yogita | Full-Stack Developer & Project Lead | FastAPI backend, Groq AI integration, Supabase schema, CORS security, React frontend, deployment (Vercel + Render), documentation |

## 2. Demo Role Assignment

| Segment | Demonstrator | Content |
|---|---|---|
| Introduction & Overview | Yogita | Problem, solution, and live URLs |
| Live Demo – Frontend Flow | Yogita | Signup → New Trip → Generation → Budget → Regeneration |
| Technical Deep-Dive | Yogita | Health check, Swagger docs, test suite results |
| Security Explanation | Yogita | CORS regex, JWT flow, RLS, secret management |
| Q&A; | Yogita | Address evaluator questions |

## 3. Contribution Summary

This project was developed as a solo full-stack implementation. All 20 functional features, 34 automated tests, the CORS security middleware, the pydantic-settings configuration system, the Groq AI prompt engineering, the Supabase RLS migration, and the complete documentation structure were designed and implemented by the project author.

## 4. Technologies Demonstrated by Role

| Area | Technologies Demonstrated |
|---|---|
| AI/ML Integration | Groq SDK, openai/gpt-oss-120b, prompt engineering, JSON parsing, retry logic |
| Backend Engineering | FastAPI, Pydantic v2, JWT/JWKS, async Python, tenacity, pytest |
| Frontend Engineering | React 18, TypeScript, Vite, Tailwind, React Hook Form, Zod, Recharts |

| | |
|---|---|
| Security | CORS allow_origin_regex, Supabase RLS, server-side secrets, gitignore |
| Database | PostgreSQL, JSONB, UUID, indexes, triggers, Row Level Security |
| Deployment | Vercel (SPA), Render (Python web service), .python-version, env vars |
